

Dear Hiring Manager,

I hope this message finds you well! My name is Daniel Anorue Jr., a Junior Computer Science major at The University of Southern Mississippi, and I am excited about the opportunity to apply for the Software Engineer intern position.

My journey in software development began at a bootcamp in Abuja, Nigeria, where I got hands-on experience learning languages like HTML, CSS, JavaScript, React, C++ and Python. Currently, I am honing my skills as a full-stack developer in many ways, including a recent internship where I collaborated on a web application for influencer management, which taught me the importance of teamwork and Agile methodologies in delivering high-quality software, and taking courses (with CodePath) that would help boost my skill set in other languages and fortify the ones I already know.

I would not consider myself the most qualified of your applicants, but I have faith in my abilities and believe that I would be of immense value to your team. I have invested time and resources to bettering myself to be able to compete in the job market and I am happy with the results thus far.

I stand to gain much more experience, exposure and knowledge working for a company like yours. It contributes significantly to my development, as a professional, to be considered in a company as deeply rooted in the technological field.

I am eager to bring my passion for coding and problem-solving to your team. I believe my background in both front-end and back-end development will allow me to contribute effectively.

Thank you for considering my application. I look forward to the possibility of discussing how I can add value to your projects!

**Best regards,**

**Daniel Anorue Jr.**
